

Backyard Gardening Series

What is Drip Irrigation?

April 15, 2014

Tuesday, 6:30 pm—8:30 pm

Texas A&M AgriLife Ext Svc
3355 Cherry Ridge, Suite 208
San Antonio, TX 78230-4818
(210) 467-6575

Drip irrigation is a method that saves water by allowing water to drip slowly to the roots of plants, either onto the soil surface or directly onto the root zone, through a network of valves, pipes, tubing, and emitters. Almost no water is lost through surface runoff or evaporation, and soil particles have plenty of opportunity to absorb and hold water for plants. Speaker is Dr. Tom Harris, Bexar County Master Gardener and is presented by David Rodriguez, County Extension Agent-Horticulturist.

RSVP to Angel Torres
at 210 467-6575 or matorres@ag.tamu.edu
\$10 per person

Individuals with disabilities who plan to attend meeting and who may need auxiliary aid, service or accommodation must contact the Bexar County Office at (210) 467-6575 five days prior to the event so that appropriate arrangements can be made.
